## ORGANIC FUEL CELLS AND FUEL CELL CONDUCTING SHEETS

Examiner: Yuan S.N. 10/664,772 Art Unit: 1745 April 26, 2007

## Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 14, 2007 has been entered. Claim 17 was amended. Claims 58-63 were canceled. Claims 64-69 were added.
- 2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on April 27, 2006.

## Claim Rejections - 35 USC § 103

3. The claim rejections under 35 U.S.C. 103(a) as unpatentable over Davis and Beckmann et al. on claims 17,21,51-57 are withdrawn, because the independent claim 17 has been amended. The claim rejections under 35 U.S.C. 103(a) as unpatentable over Davis and Beckmann et al. as applied to claims 17,21,51-57, and further in view of Ha et al. on claims 18,19 are withdrawn, because they are overcome by the Attribution Declaration filed March 14, 2007. The claim rejections under 35 U.S.C. 103(a) as unpatentable over Davis, Beckmann et al. and Hirsch et al. on claim 22 are withdrawn, because the independent claim 17 has been amended. The claim

Art Unit: 1745

rejections under 35 U.S.C. 103(a) as unpatentable over Davis, Beckmann et al. and Vecere on claim 23 are withdrawn, because the independent claim 17 has been amended.

## Allowable Subject Matter

Claims 17-19,21-23,51-57,64-69 are allowed. The following is a statement of reasons for 4. the indication of allowable subject matter: The invention of independent claim 17 recites a passive direct organic fuel cell comprising an anode, an anode enclosure communicating with the anode and contain an organic fuel solution that is at least 1.8 M formic acid, said anode enclosure having a gas remover comprising a plurality of passages that are configured to allow passage of CO<sub>2</sub> from said enclosure, said anode enclosure being configured to substantially prevent passage of said fuel solution therefrom during operation of the fuel cell whereby said fuel cell operates as a passive fuel cell, wherein said anode said cathode and said electrolyte are operative to generate power having a power density of at least 10 mW/cm<sup>2</sup> when operating at room temperature. The closest prior art of record, Davis and Beckmann, does not teach or suggest a passive direct organic fuel cell wherein anode enclosure is configured to substantially prevent passage of the fuel solution therefrom during operation of the fuel cell whereby the fuel cell operates as a passive fuel cell as stated in the claim. The invention of independent claim 68 recites a passive direct organic fuel cell comprising an anode, a sealed anode enclosure communicating with the anode and contain an organic fuel solution that is at least 4.4 M formic acid, said anode enclosure having a gas remover comprising a plurality of passages that are configured to allow passage of CO<sub>2</sub> from said enclosure, said organic fuel solution contained in

Art Unit: 1745

said sealed anode enclosure being free from circulation by pump, wherein said anode, said cathode, and said electrolyte are operative to generate power having a power density of at least 14 mW/cm<sup>2</sup> when operating at room temperature. The closest prior art of record, Davis and Beckmann, does not teach or suggest a passive direct organic fuel cell containing an organic fuel solution that is at least 4.4 M formic acid and the fuel cell can generate a power density of at least 14 mW/cm<sup>2</sup> when operating at room temperature as stated in the claim. The invention of independent claim 69 recites a passive direct organic fuel cell comprising an anode, an anode enclosure communicating with the anode and contain an organic fuel solution that is at least 8.8 M formic acid, said anode enclosure having a gas remover comprising a plurality of passages that are configured to allow passage of CO<sub>2</sub> from said enclosure, said organic fuel solution contained in said sealed anode enclosure being free from circulation by pump, wherein said anode, said cathode, and said electrolyte are operative to generate power having a power density of at least 10 mW/cm<sup>2</sup> at a constant voltage of 0.26 V when operating at room temperature for a period of at least 3 hours with no more than about 0.6 cc of said fuel solution. The closest prior art of record, Davis and Beckmann, does not teach or suggest a passive direct organic fuel cell containing an organic fuel solution that is at least 4.4 M formic acid and the fuel cell can generate a power density of at least 14 mW/cm<sup>2</sup> at a constant voltage of 0.26 V when operating at room temperature for a period of at least 3 hours with no more than about 0.6 cc of said fuel solution as stated in the claim.
